Experience

- **AI Intern, KaliberLabs.AI (June 2025- August 2025)**
 - Exploring insights from web sources and current AI trends to keep updated.
 - Learnt about Structural & Spatial Control (ControlNet) which allows to use an existing image as a "skeleton" for a new generation.
 - Lightweight adapters like LoRA & Textual Inversion were used to teach the AI specific concepts.
 - Latent space manipulation helped to adjust numerical vectors within a compressed, high-dimensional space to control, alter, or create new content in various contexts.
- **ML Intern, NIELIT Chennai (June 2024 - August 2024)**
 - Worked on Airline Customer Satisfaction project to determine whether the passengers were satisfied by the airline services based on feedback.
 - Conducted indispensable data preprocessing steps like data cleaning (missing values imputation, handling outliers), data transformation, feature engg and normalization.
 - Performed extensive exploratory data analysis to unravel crucial insights.
 - Applied 5 ML Models along with cross-validation and fine-tuning, and achieved an accuracy Of 96% for Random Forest model with least error rate.

Projects

- **Loan Defaulter Prediction System**
 - Developed a platform to detect potential loan defaulters on the basis of loan amount, mortgage due, job and credit score ratings.
 - Implemented custom environment using HTML, CSS, JS and Flask for Loan Defaulter Prediction System where users can input their values and predict their chances of defaulting.
 - Applied 5 ML Models (RF, SVM, KNN, DT and Log-Reg) and found that Random Forest performed better and achieved the highest accuracy (82%).
 - It leverages financial data and provides crucial insights that could help bankers to provide loans to individuals by accessing their level of risk based on credit scoring.
- **Netflix Movie Genre Classification With LSTM**
 - Makes use of semantic context, keywords (e.g., "spaceship," "detective," "love"), and narrative structure that define a genre to classify movie genres.
 - EDA typically reveals a significant skew toward popular genres like "Drama" or "Comedy," while niche genres like "Documentary" or "Horror" have fewer samples.
 - Plotting the distribution of word counts in descriptions helps determine the MAX_LEN parameter for the LSTM.
 - Strategic sightings in the code show the use of Dropout to prevent **overfitting**, which is a common risk in text classification where the model might just memorize keywords.

• Gen-AI Based Autonomous Tech Pack Generation

- Designed and developed an AI agent deeply integrated with the laptop operating system to autonomously devise innovative tech packs based on user input regarding patterns, designs, colors etc.
- Improvised Stable Diffusion model along with LoRA (Low Rank Adaption) to fine-tune the model and generate specific tech packs based on brand information.
- Built-in Cross-Model Consistency so that base structure of the shirt remains identical while only the attributes (color/pattern) change.
- Hardware Acceleration using TPU v5e-1 allows various "Agentic" workflows to generate hundreds of variations and vetted in minutes rather than hours, and hence economically viable.

Licenses & Certifications

1. Attended the Data Mining coursework taught by Prof. Pabitra Mitra, IIT Kharagpur, at the NPTEL MOOC and secured first division in it.
2. Participated in Machine Learning Using Python program organized by NIELIT Chennai, regarding exposure to essential ML frameworks, processing, hyperparameter fine-tuning and model deployment, and secured A+ in assignments and MCQ examination.

Education

<i>Educational institute</i>	<i>Level of graduation</i>	<i>Result</i>
DAV Public School, Gandhi Nagar, Ranchi	ALL INDIA SECONDARY SCHOOL EXAMINATION, CBSE	96.6%
DAV Public School, Gandhi Nagar, Ranchi	ALL INDIA SENIOR SCHOOL CERTIFICATE EXAMINATION, CBSE	94.4%
National Institute of Advanced Manufacturing, Ranchi	BACHELOR OF TECHNOLOGY IN COMPUTER ENGINEERING	8.25 CGPA

Skills

- **Languages:** Python, JavaScript, C++, Java
- **Libraries And Tools:** PyTorch, NumPy, Pandas, LangChain, Tensorflow, Git, Linux, Docker
- **Software And Concepts:** Message Queues, Kibana Systems, MS-Excel, NLP, GANs, MLOPs
- **Backend And Systems:** REST APIs, MySQL, PostgreSQL, Redis, RabbitMQ, OS-level Automation

Activities & Interests

- Secured 6th position in IEEE ML Competition in college organized by the IEEE Student Chapter Branch, NIAMT.
- Attended C programming workshop organized by the Department of Electronics and Computer Engineering, NIAMT
- Solved about 450+ problems on LeetCode and participated in weekly contests.
- Second prize in Essay writing competition organized by the Literary Club, DAV Public School Gandhinagar.
